

Dynpg Version 4.5.2 verfügbar.

Ab heute ist Version 4.5.2 verfügbar. Neben vielen Bugfixes und Optimierungen bringt es dabei auch ein paar kleine Neuerungen mit.

1. Wichtigste Neuerungen

- Neu: EXIF-Daten als Beschreibung im Dateiupload verwenden.
- Neu: Mehrere Formulare auf einer Seite möglich.
- Neu: META-Datenfelder je Artikel (Titel + Beschreibung + Stichwörter).
- Neu: Separator im Lead eines Artikels ist per SetParam_AA_IgnoreLeadSeparator() ignorierbar.
- Erhöhte Sicherheit.
- Kompatibilitätsprobleme des Fronend-Editiermodus behoben.
- Diverse Bugfixes.

2. Changelog

- bugfix: close all tinyMCE-instances by default and update "visible"-Array instead of "closed"-Array.
- added: dynpg_sendmail return value boolean -> false if one or more mails failed to send otherwise true
- bugfix: prevent double & encoding on src and flashvars values on media plugin init
- bugfix: changed own filebrowser popup function to tinymce method to prevent editor instance loss
- change: do only strip out "msc"-classes within the tinyMCE
- added: SetParam_PathToNextGroupPage() to add manual a list-referer for groups with subgroups
- change: disabled "paste_text_sticky" in tinyMCE since this was annoying
- bugfix: enabled saving in fulltext mode via "ctrl+s" in FEM
- bugfix: check php-version in dynpg_htmlentities_rigid() within functions.php
- changed: hide all TinyMCE instances in FEM by default
- changed: added %RELPAGE% instead of php_self for group breadcrumb
- changed: added space instead of newline as first character to prevent newline within tags
- changed: trim after strip_tags to prevent whitespaces
- bugfix: delete empty last line to prevent linebreak within tag.
- added: SELF as error + success article option in tiny_mce formtable plugin to refer to the article itself without the need to set an id.
- added: 3 control methods to prevent plugin parsing within group shorttext and lead fields.
- changed: _AA_loadText -> _AA_LoadText standardized naming of internal variables.
- bugfix: text clean on preview.
- bugfix: ajax new article form fields default values empty.
- changed: show ticker only if not loggedin yet to prevent loading time.
- changed: added newline on template top because of templateengine bug on controlconstruct as first character.
- added: meta fields for groups and articles.
- bugfix: duplicate group public_until set to null instead of 0000-00-00.
- bugfix: OK-Button was invisible in IE.
- added: language code as default variable Main->language into template.
- bugfix: fileresize with max rule without image distortion.
- bugfix: create article function stripslashes + utf8decode only if ajax call.
- bugfix: invalid date format strings and file ending whitespace deleted.
- bugfix: invalid date format strings.
- added: _A_IgnoreLeadSeparator.
- added: template variables _NOTAGS_NOHTML + _NOTAGS for all fields.
- bugfix: default value handling while multiple forms on one page.
- bugfix: default active and disabled checkbox leave checked always!
- bugfix: form error / success handling while same form more than once on same page.
- bugfix: form error / success handling while more than one form on a page.
- added: form_error.js for dynamic form field class on error.
- bugfix: add form success error strings only for corresponding form.
- bugfix: replace count with strlen for L - Template fields.
- bugfix: set wmode=opaque only if not given from parameters, otherwise transparent is not possible anymore.
- bugfix: disabled php info warnings.
- bugfix: dynpg_htmlentities_rigid() prevent double encoding for utf8 strings.
- bugfix: set rootElement for breadcrumb path on isGroupContent and isGroupStartContent depended.
- changed: hide article element breadcrumb on group articles not set to startarticle.
- added: internal plugin get parameters to remove within dynpg_insert_urlheader().
- added: new function SetParam_AA_IgnoreLeadSeparator() and internal variable _AA_IgnoreLeadSep to determine if the separator within lead should be ignored. Default FALSE!

- bugfix: extended dynpg_datetotimestamp() function in order to support more dates and times; do not produce php-errors.
- changed: support link to new contact web page.
- bugfix: (un)secure_template_syntax enhanced with # replacements to prevent template engine crash.
- update: pear classes.
- bugfix: norendering return value.
- bugfix: enquote quotes in dynpg_htmlentities_rigid(), too.
- added: take exif data as description if not already given and singleupload chosen.
- added: read exif data image description into description field on zip upload.
- bugfix: unsecure_escape before returning contenttext of norendering templateset.
- added: empty templateset "norendering" to use for faster content retrieval of plugins, which does not need anything else than already rendered content from plugin itself.
- changed: check for strpos of template variables within template string before replacing to speed up code.
- changed: file to file_get_contents() and added getTemplate within other functions.
- changed: perform() optimized for speed.
- changed: PerformTextFormat only if \$text parameter not empty.
- changed: add debug string only if templateDebug variable is set to true.
- added: unformatted dates as template vars for list view.
- added: possibility to change dhtml menu template for 2nd, 3th tier menus.
- bugfix: establish db connection before mysql_real_escape_string() call.
- new: plugins are now able to specify that they need the SAJAX environment; in this case, dynpg loads the necessary files although there is no active edit mode or even an active user session.
- bugfix: clear tinyMCE when calling the "open_group_create_refid_form".
- bugfix: setting language was not possible.
- bugfix: wrong usage of dynpg_get_plugin_language_proc() in \$force mode.
- bugfix: sendmail text version without title content from html.
- bugfix: set language to form language for success + error string translations.
- bugfix: copy_group parameters \$copyArticles + \$articleContents ByValue and not ByReference.
- bugfix: only load PEAR if not still available (caused fatal error when dynpg >= 4.5 run under php without JSON support).
- bugfix: check if FORM_DATA is empty.
- bugfix: algorithm to save single article rights did not work correctly, thus implemented new.
- changed: to adapt to the newest tinymce link plugin and url encoded strings.
